

For this project I created 2 entities: Person and Country. I am new to spring boot so in the beginning I created the entities and then created the controllers and repositories testing them using postman and then created the interface and services and tied everything together. When you run the app you get the following view:

Add record

Given Name *

Surname *

Address line 1 *

Address line 2

Town *

County

Country * United Kingdom

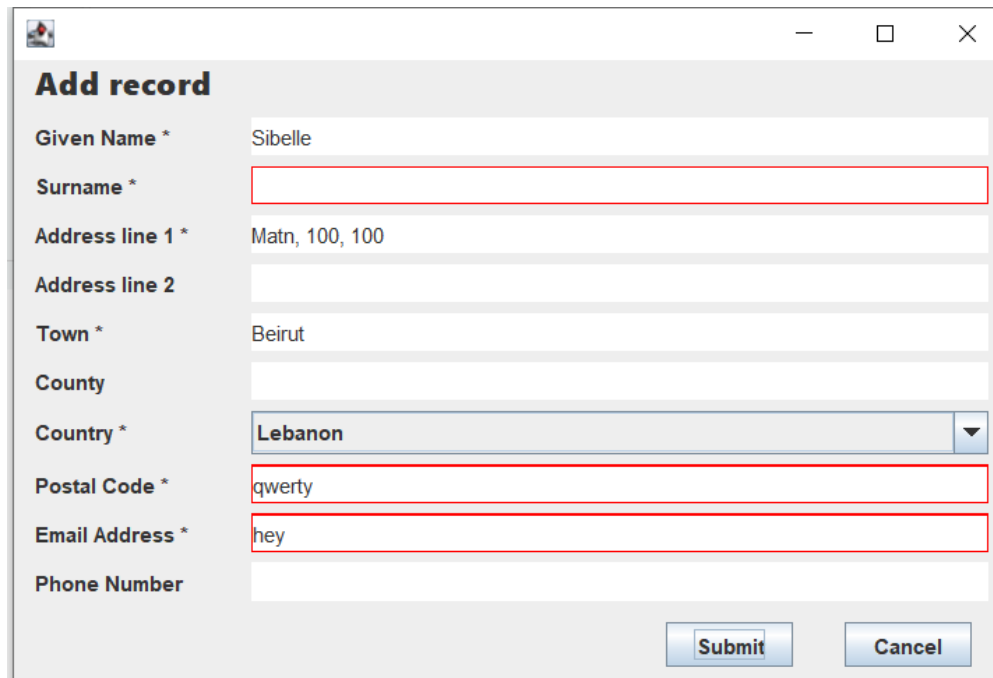

Postal Code *

Email Address *

Phone Number

Submit Cancel

The combobox is populated from the countries list previously created. If you click cancel the app shuts down and if you click submit, the fields are validated and if any field is wrong, the field border turns red.

Add record

Given Name * Sibelle

Surname *

Address line 1 * Matn, 100, 100

Address line 2

Town * Beirut

County

Country * Lebanon

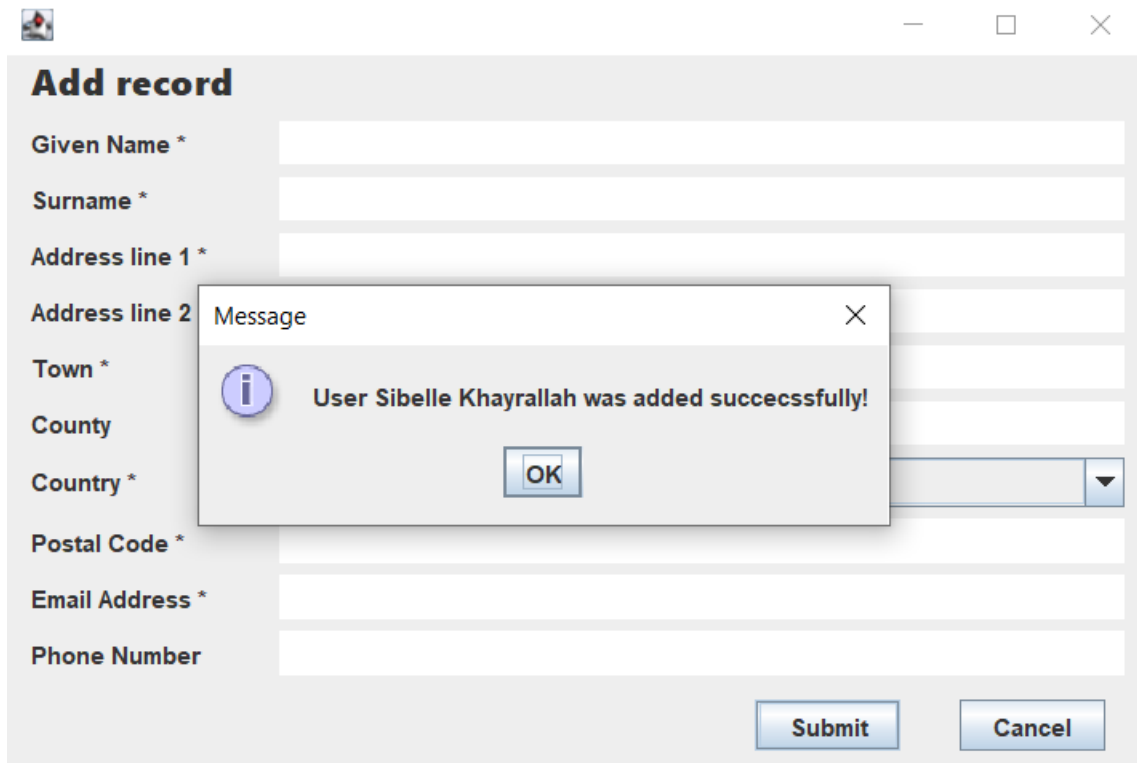

Postal Code * qwerty

Email Address * hey

Phone Number

Submit Cancel

If you submit everything correctly you get a dialog and the form resets.

The image shows a web application window titled "Add record". The window has a standard Windows-style title bar with a small icon on the left and minimize, maximize, and close buttons on the right. The form itself is light gray and contains several input fields, each with a label and an asterisk indicating it is required:

- Given Name *
- Surname *
- Address line 1 *
- Address line 2 *
- Town *
- County
- Country *
- Postal Code *
- Email Address *
- Phone Number

At the bottom right of the form are two buttons: "Submit" and "Cancel". A modal dialog box is currently open in the center of the screen, titled "Message". It contains an information icon (a lowercase 'i' in a circle) and the text "User Sibelle Khayrallah was added successssfully!". There is an "OK" button at the bottom of the dialog. The dialog box is slightly offset to the right, partially obscuring the "Address line 2" field and the "Country" dropdown menu.
